Exploring the Value Story

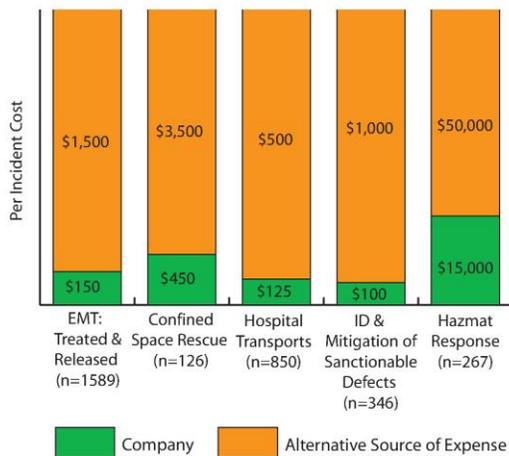

How metrics proved the importance of one security executive's internal first responder program

Created by George Campbell, Security Executive Council Emeritus Faculty

Our value has to be connected to our success in measurably impacting risk. What are the measures, and how are you communicating the critical messages? Sure, every program is delivering some statistics — typically lists of incidents or activities that they sell as “metrics.” But real metrics inform by creating a storyline that demonstrates the need for action. Lists are just the nails you use to build these stories.

I once worked with a CSO of a global manufacturing company who launched an initiative to identify metrics across the security organization “to tell the value story to management” and to “demonstrate in measurable ways where and how we bring value to the bottom line of our company.” He found value delivered in guard force operations, investigations, background vetting, risk assessments, supply chain protection, workplace violence response, and a variety of previously unprobed corners of security service delivery. For this example, we’ll take a look at his metrics regarding the company’s fire and life safety first responders.

This company’s industrial operations involve the potential for fire, the presence of hazardous materials, and accompanying employee safety risk. To help manage this risk, the security organization developed an internal first responder team. The assumption going in was that management would see Security’s maintenance of a first responder program as wasteful, because the company already supported qualified public fire departments with its taxes. Why pay twice?

We categorized several areas of preventive service and incident response, as seen in the above chart. The bottom line comparison was impressive: Company cost = \$4.5M; Alternative = \$16.45M.

But the real value story is about the quality of response:

- When employees return to work quickly, productivity increases.
- Faster, better-prepared and better-equipped response equals less production downtime.
- Faster, high-quality response contributes to employee safety and morale.
- Preventive operations result in lower construction and insurance costs.
- Proactive inspection programs mitigate fire, safety and business interruption risk.
- OSHA and other regulatory sanctions are avoided with aggressive inspection.
- Company and individual health insurance costs are reduced.

Several employee lives were saved by the Corporate Security first responders in the course of this year of analysis (2010).

Of course, the average security executive doesn't have an internal first responder service in their organization. But think about what services you do deliver that can tell your unique value story.

Protective operations: Are your officers trained to respond to health and safety events and have they done so successfully in the past? Are their tours organized to identify and eliminate hazards or to identify exploitable vulnerabilities that could result in loss, such as business interruption or asset compromise?

Risk assessments: Do you have a program that proactively examines the range of security-related risks to critical assets? What would the cost of compromise have been for those vulnerabilities your team found and eliminated? What fines or litigation were avoided by eliminating a failed security measure or risky practice?

Timely response: When security programs deliver faster, quality response to risk events, you measurably reduce the cost of impact.

Awareness: When you deliver learning to the business, you impact intelligent accountability and contribute to prevention of loss.

The idea here is to think about how we prevent bad things from occurring and reduce the consequences when they do occur. We add value in many ways, but we often fail to document and tell our story. What is your story?

About the Security Executive Council

The SEC is the leading research and advisory firm focused on corporate security risk mitigation solutions. Having worked with hundreds of companies and organizations we have witnessed the proven practices that produce the most positive transformation. Our subject matter experts have deep expertise in all aspects of security risk mitigation strategy; they collaborate with security leaders to transform security programs into more capable and valued centers of excellence. Watch our [3-minute video](#) to learn more.
