RISK/THREAT ASSESSMENT & MANAGEMENT

Integrated Security Management Framework (ISMF)

Do you feel your procedures for addressing security issues are lacking an organization-wide risk mitigation structure? Is the security program utilization between and among business units random or inconsistent? If your organization were to have a tragic incident, would your security program be defensible and would executives be shocked that there are gaps in implementation?

A security management framework will provide a process to consistently and comprehensively implement security elements across the organization.

How can SEC help?

- Identify the major functions performed by Security, which will form the basis of the framework.
- Perform an audit or gap analysis of your program implementation process and comprehensiveness.
- Help to set goals and objectives, establish communication programs, and provide perspective, advice and support.
- Assist in identifying measures and metrics to assess performance.

Transformation

A ISMF means a Security organization is better at identifying, mitigating and monitoring risks and more consistently meeting the organization’s expectations for growth and change.

The Security Executive Council (SEC) is the only research and advisory firm that specializes in corporate security and is comprised of former security executives. We understand the issues and work to solve obstacles to program and leadership success.

To learn more about ISMF for your Security organization, or other ways we can collaborate with you, please contact us at contact@secleader.com

HOW OTHERS HAVE BENEFITTED FROM THIS SOLUTION

SEC’s process has helped our clients:

- Improve the organization’s speed in reacting to events.
- Reduce costs by removing redundant functions and operations.
- Eliminate program gaps and gain consistency of use by internal customers.
