Security Barometer Results - Personal Electronic Devices in the Workplace

Created by the Security Executive Council

Personal Electronic Device Use Continues to Increase

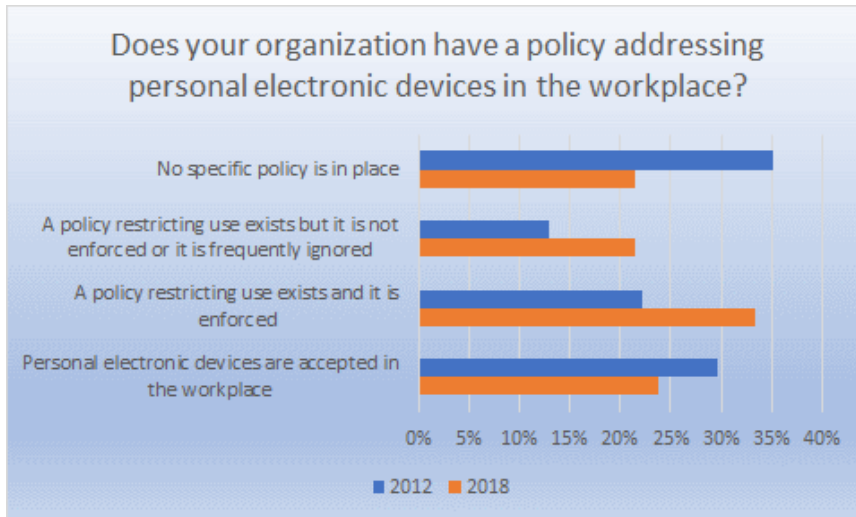

It's no longer a question of who has communication devices on them at work but whether the organization is making an effort to address it. This SEC survey conducted in 2018 found the number of respondents reporting using personal electronic devices in the workplace has increased to 80%. In addition, the frequency of use of the personal devices has been growing.

Enforcement of Policies

In both the 2012 and 2018 surveys the goal was to gather more information about how organizations are dealing with the use of personal electronic devices.

Since 2012 there has been a roughly 40% increase in the number of organizations with a policy addressing personal electronic devices in the workplace. While strict enforcement of the policies has climbed 50%.

If you are assessing risk for your organization, consider bringing the Security Executive Council on board. Our successful practitioner subject matter experts do more than identify risk, they help you to increase the value your security program brings to organizations.
