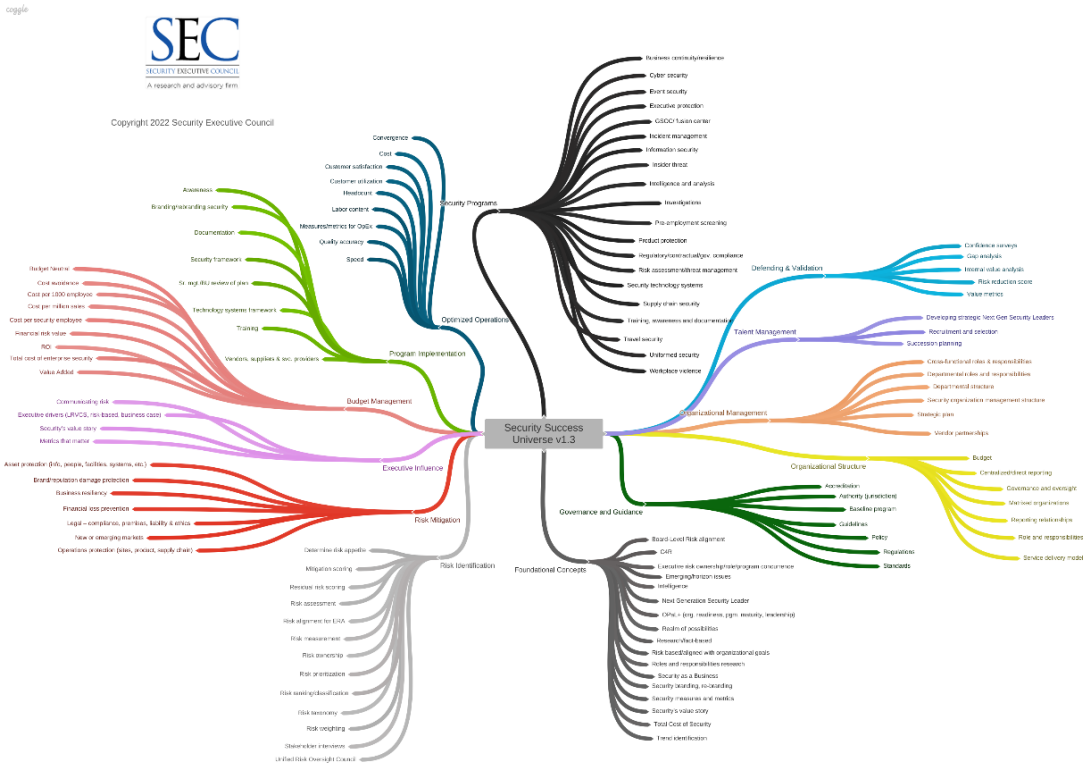
The SEC Security Success Universe Assessment



Research conducted by the SEC over 17+ years on security leaders' key success elements has resulted in the creation of the Security Success Universe™. There are 13 categories and 115 elements to consider.

We now have an assessment security practitioners can use to evaluate the status of their security organization.

This is a high-level assessment meant to give an overview. Security leaders and their teams can use this as a gap analysis exercise or to present to senior management.

Participants answer yes, no, or not applicable to statements that reflect the 115 success elements. Below are examples of results charts. Note, some security organizations will not be as far along as others for reasons out of their control, e.g., the first corporate security entity is being developed, or there is a lack of resources.

Assessments can be the entire “universe” or specific categories of immediate concern.
